SOCIETY OF SYSTEMATIC BIOLOGISTS
ANNOUNCEMENTS

It’s easy to join SSB.—You can join the Society of Systematic Biologists, renew your membership, or contact Customer Service at Oxford University Press’ website: https://academic.oup.com/sysbio/subscribe.

Systematic Biology has an Open Access option.—Authors have the option of designating their Systematic Biology papers as Open Access. Details are available from Oxford University Press at https://academic.oup.com/journals/pages/open-access.

The Society of Systematic Biologists has two student representatives on the council: Anne Chambers and Sam Church.—Anne is a fourth-year doctoral candidate advised by David Hillis at the University of Texas at Austin. Her research focuses on contact zone interactions and their implications for speciation and species delimitation in herpetofauna. Sam is a third-year doctoral candidate advised by Cassandra Extavour at Harvard University. In his research he studies invertebrate evolution and development, currently focusing on the evolution of the insect egg, and he develops software for evolutionary analyses. The SSB student representatives work with the council to support activities and initiatives to better serve our student members.

Publisher’s Award.—The journal is delighted to announce the two winners of this year’s Publisher’s award, which is presented to the two best papers based on student research published in Systematic Biology during the previous year. The two winning papers and winners are:

Jacob S. Berv, Cornell University

Konstantinos Angelis, University College London
