Contents

Papers
Evaluation of computational programs to predict HLA genotypes from genomic sequencing data
Denis C. Bauer, Armella Zadoorian, Laurence O. W. Wilson, Melbourne Genomics Health Alliance and
Natalie P. Thorne .......................................................... 179

Identification and analysis of the human sex-biased genes
Sisi Guo, Yuan Zhou, Pan Zeng, Guoheng Xu, Guoqing Wang and Qinhua Cui ...................... 188

Logic programming to infer complex RNA expression patterns from RNA-seq data
Tyler Weirick, Giuseppe Militello, Yuliya Ponomareva, David John, Claudia Döring, Stefanie Dimmeler and
Shizuka Uchida .............................................................. 199

Visualizing and comparing results of different peptide identification methods
Yassene Mohammed and Magnus Palmblad ........................................ 210

A large-scale comparative assessment of methods for residue–residue contact prediction
Qiqige Wuyun, Wei Zheng, Zhenling Peng and Jianyi Yang ................................. 219

A comprehensive review and comparison of different computational methods for protein remote
homology detection
Junjie Chen, Mingyue Guo, Xiaolong Wang and Bin Liu ........................................ 231

MicroRNAs and their variants in an RNA world: implications for complex interactions and diverse
roles in an RNA regulatory network
Li Guo and Tingming Liang ..................................................... 245

miRandb: a resource of online services for miRNA research
Seyed Hamid Aghaee-Bakhtiari, Ehsan Arefian and Pierre Lau ....................................... 254

Predictive approaches for drug combination discovery in cancer
Seyed Ali Madani Tonekaboni, Laleh Soltan Ghoraie, Venkata Satya Kumar Manem and
Benjamin Haibe-Kains ........................................................... 263

Data-driven approaches used for compound library design, hit triage and bioactivity modeling in
high-throughput screening
Shardul Paricharak, Oscar Méndez-Lucio, Aakash Chavan Ravindranath, Andreas Bender,
Adriaan P. IJzerman and Gerard J. P. van Westen .............................................. 277

Genome, transcriptome and proteome: the rise of omics data and their integration in
biomedical sciences
Claudia Manzoni, Demis A. Kia, Jana Vandrovcova, John Hardy, Nicholas W. Wood, Patrick A. Lewis and
Raffaele Ferrari ............................................................. 286

Computational modelling folate metabolism and DNA methylation: implications for
understanding health and ageing
Mark T. Mc Auley, Kathleen M. Mooney and J. Enrique Salcedo-Sora .......................... 303

Computational modeling of brain pathologies: the case of multiple sclerosis
Francesco Pappalardo, Abdul-Mateen Rajput and Santo Motta ................................. 318

A review on machine learning principles for multi-view biological data integration
Yifeng Li, Fang-Xiang Wu and Alioune Ngom .......................................................... 325

What (not) to expect when classifying rare events
Rok Blagus and Jelle J. Goeman ............................................................. 341

Software Review
Design of RNAs: comparing programs for inverse RNA folding
Alexander Churkin, Matan Drory Retwitzer, Vladimir Reinharz, Yann Ponty, Jérôme Waldispühl and
Danny Barash ............................................................... 350
Corrigenda
Bioinformatics in the Netherlands: the value of a nationwide community
Celia W. G. van Gelder, Rob W. W. Hooft, Merlijn N. van Rijswijk, Linda van den Berg, Ruben G. Kok,
Marcel Reinders, Barend Mons and Jaap Heringa ........................................................... 359

Bioinformatics tools for quantitative and functional metagenome and metatranscriptome data
analysis in microbes
Sheng-Yong Niu, Jinyu Yang, Adam McDermaid, Jing Zhao, Yu Kang and Qin Ma ......................... 360
