Abstract submission for the poster and concurrent contributed sessions opens November 14, 2016. Submissions are due by January 17, 2017.

Please follow the using guidance to prepare your abstract for online submission.

1. Go to https://epiresearch.org/annual-meeting/50th-anniversary/abstract-submission/. Enter your text in the space provided. All abstracts must be submitted online.

2. Do not include references, figures, tables, or mathematical equations in the abstract. Avoid acronyms, and, where necessary, spell them out when used for the first time (ORs, RRs and CIs do not need to be spelled out). Select one topic area from the list below, if applicable, that will be used to organize concurrent contributed sessions. The abstract should not exceed 2,000 characters, including spaces. Author information is in addition to the 2,000 characters.

3. Presentation of specific data and methodologic details assist reviewers in judging the quality of the research. New findings are weighed more favorably than affirmation of known relations. Clarity and brevity of writing will allow evaluation of the importance of the research. Each abstract is scored by a minimum of two reviewers. An overall acceptance proportion is applied to each subject area. The allocation of papers therefore represents the number of abstracts submitted for the subject areas.

4. The submitting author will be notified by email on or before March 1, 2017 with a final decision. If you do not receive a notification, please contact Ms. Courtney Long (clong@epiresearch.org) after this date.

Select a General Topic Area (primary selection used for abstract review):

- Aging
- Alternative medicine
- Behavior
- Cancer
- Cardiovascular
- Diabetes
- Environment/climate change
- Ethics
- Genetics
- Global health
- Health disparities
- Health services
- HIV/AIDS
- Infectious disease
- Injuries
- Men’s health
- Mental health
- Methods
- Molecular
- Neurology
- Nutrition
- Obesity
- Occupational
- Pediatric
- Perinatal
- Policy
- Renal
- Reproductive
- Respiratory
- Screening
- Social
- Statistics
- Substance use
- Violence
- Women’s health

A Systems Science Approach to Understanding Polytrauma and Blast-Related Injury: Bayesian Network Model of Data From a Survey of the Florida National Guard.

Peter A. Toyinbo, Rodney D. Vanderploeg, Heather G. Belanger, Andrea M. Spehar, William A. Lapcevic, and Steven G. Scott

Instructions to Authors can be found on the following website: https://academic.oup.com/aje

An online collection of our Primers on -Omic Technologies is available on our website.

The University of Wisconsin School of Medicine and Public Health (SMPH) invites applications and nominations for the position of Chair of the Department of Population Health Sciences.

The Department of Population Health Sciences at the University of Wisconsin is an interdisciplinary department with the goals of understanding, preserving, and improving the health of populations and individuals. To accomplish these goals, the department conducts research to understand health, diseases, and their determinants across the lifespan; tests interventions to improve health; defines and addresses health disparities; and develops methodological approaches for population health research. The Department provides training, mentorship, and education in the methods of epidemiology, health services research, social and behavioral health sciences, public health, and related disciplines to undergraduate, graduate, and professional students, post-doctoral fellows, and faculty. The Department of Population Health Sciences also develops partnerships and collaborations with researchers, clinicians, communities and institutions to improve the understanding of the determinants of health and translate population health research findings into policy and practice.

We seek a proven leader with an outstanding academic background, strong research credentials, demonstrated commitment to education, experience in mentoring faculty at all levels, and effective management skills. The Chair will be expected to play major leadership roles within the SMPH and to facilitate growing collaborations with our academic health system (UW Health) and across the UW-Madison campus.

The successful candidate will have a compelling vision for the future of Population Health Sciences in a leading public academic institution. Candidates must have a doctoral-level degree with substantial background and experience in teaching and research and must qualify for appointment as a tenured professor at the University of Wisconsin-Madison.

Send a letter of application or nomination, with curriculum vitae, to:

Val Gilchrist, MD, and Paul Rathouz, PhD
Co-Chairs of the Population Health Sciences Chair Search Committee
